This monograph is dedicated to

Professor **T. Nejat Veziroglu**,
Director,
Clean Energy Research Institute,
University of Miami, Coral Gables, Florida,
and
Editor in Chief,
International Journal of Hydrogen Energy,
Elsevier Science, Oxford, England,

because his commitment to scientific
democracy for qualified inquiries and
his impeccable editorial processing
have permitted the birth of the new
discipline presented in this monograph.

Contents

Preface	xiii
Acknowledgments	liii
1. INTRODUCTION	1
1 Axiomatic Consistency of Quantum Chemistry	1
2 Scope of These Studies	2
3 Insufficiencies of Quantum Chemistry for Molecular Structures	5
4 Insufficiency of Quantum Chemistry for Chemical Reactions	11
5 Insufficiencies of Quantum Chemistry for Biological Structures	12
6 The Central Topic of Study of This Monograph	14
7 Catastrophic Inconsistencies of Generalized Nonunitary Theories on Conventional Mathematics	19
8 Hadronic Mechanics	27
9 Hadronic Superconductivity	34
2. ELEMENTS OF ISO-, GENO-, AND HYPER-MATHEMATICS AND THEIR ISODUALS	59
1 Introduction	59
2 Elements of Isomathematics	61
2.1 Isounits and Isoproducts	61
2.2 Isonumbers and Isofields	64
2.3 Isospaces and Isogeometries	65
2.4 Isodifferential Calculus	69
2.5 Isohilbert Spaces	70
2.6 Isoperturbation Theory	72
2.7 Isofunctional Analysis	74

2.8	Isolinearity, Isolocality, Isocanonicity and Isounitariness	75
2.9	Lie-Santilli Isotheory	77
3	Elements of Genomathematics	81
3.1	Introduction	81
3.2	Main Structural Lines of Genomathematics	82
3.3	Genounits and Genoproducts	88
3.4	Genonumbers and Genofields	89
3.5	Genospaces and Genogeometries	91
3.6	Genodifferential Calculus	92
3.7	Genohilbert Spaces	93
3.8	Genolinearity, Genolocality, and Genounitariness	94
3.9	Lie-Santilli Genotheory	95
4	Hypermathematics	97
5	Isodual Mathematics	99
3.	FOUNDATIONS OF HADRONIC CHEMISTRY	107
1	Introduction	107
2	Classical Foundations of Hadronic Chemistry	111
2.1	The Historical Teaching of Lagrange and Hamilton	111
2.2	The Inevitability of the Historical Teaching	112
2.3	Problematic Aspects of External Terms	113
2.4	Classification of Hamilton's Equation with External Terms	114
2.5	Hamilton-Santilli Isomechanics	115
2.6	Classical Lie-Santilli Brackets	118
2.7	Isoaction Principle	120
2.8	Hamilton-Jacobi-Santilli Isoequations	121
2.9	Examples of Classical Applications	121
2.10	Connection Between Isotopic and Birkhoffian Mechanics	122
2.11	Hamilton-Santilli Geno-, Hyper-, and Isodual-Mechanics	124
2.12	Simple Construction of Classical Isochemistry	126
2.13	Invariance of Classical Isochemistry	128
2.14	Simple Construction of Classical Genochemistry	129
2.15	Invariance of Classical Genochemistry	129
2.16	Simple Construction and Invariance of Hyper- and Isodual Mechanics	129
3	Operator Foundations of Hadronic Chemistry	130
3.1	Introduction	130
3.2	Naive Iso-, Geno, Hyper-, and Isodual Quantization	130
3.3	Structure of Operator Isochemistry	132

3.4	Basic Equations of Operator Isochemistry	134
3.5	Preservation of Quantum Physical Laws	135
3.6	Simple Construction of Operator Isochemistry	139
3.7	Invariance of Operator Isochemistry	142
3.8	Gaussian Screenings as Particular Cases of Isochemistry	143
3.9	Elements of Operator Geno-, Hyper-, and Isodual- Chemistry	144
3.10	Simple Construction of Operator Geno-, Hyper-, and Isodual Chemistry	147
3.11	Invariance of Operator Geno-, Hyper-, and Isodual Chemistry	149
3.12	Classification of Hadronic Chemistry	149
4.	ISOCHEMICAL MODEL OF THE HYDROGEN MOLECULE	155
1	Introduction	155
2	Isochemical Model of Molecular Bonds	158
3	The Limit Case of Stable Isoelectronium	168
4	Isochemical Model of the Hydrogen Molecule with Stable Isoelectronium	174
5	Exactly Solvable, Three-Body, Isochemical Model of the Hydrogen Molecule	177
6	Isochemical Model of the Hydrogen Molecule with Unstable Isoelectronium	180
7	Gaussian Approximation of the Isochemical Model of the Hydrogen Molecule as a Four-Body System	183
8	Summary of the Results	188
9	Concluding Remarks	191
	Appendix 4.A Isochemical Calculations for the Three-Body H ₂ Molecule	195
	Appendix 4.B Isochemical Calculations for the Four-Body H ₂ Molecule	196
5.	ISOCHEMICAL MODEL OF THE WATER MOLECULE	205
1	Introduction	205
2	Main Characteristics of Water	211
3	Exactly Solvable Model of the Water Molecule with Stable Isoelectronium	215
4	Gaussian Approximation of the Isochemical Model of the Water Molecule with Unstable Isoelectronium	219
5	The Method	223
6	The Main Results	226
7	Conclusions	228

6.	VARIATIONAL CALCULATIONS OF ISOCHEMICAL MOLECULAR MODELS	233
1	Introduction	233
2	Aringazin-Kucherenko Study of the Restricted, Three-Body Isochemical Model of the Hydrogen Molecule	234
3	Aringazin Variational Study of the Four-Body Isochemical Model of the Hydrogen Molecule	239
7.	APPLICATION OF HADRONIC CHEMISTRY TO NEW CLEAN ENERGIES AND FUELS	251
1	Introduction	251
2	Alarming Environmental Problems Caused by Gasoline and Coal Combustion	254
3	Alarming Environmental Problems Caused by Natural Gas Combustion	257
4	Alarming Environmental Problems Caused by Hydrogen Combustion, Fuel Cells and Electric Cars	258
5	The Need for New, Environmentally Acceptable Primary Sources of Electricity	261
6	Insufficiencies of Quantum Mechanics, Superconductivity, and Chemistry for the Solution of Current Environmental Problems	262
7	The New Clean Primary Energies Predicted by Hadronic Mechanics, Superconductivity and Chemistry	263
8	PlasmaArcFlow Reactor for the Conversion of Liquid Waste into the Clean Burning Magnegas	279
9	Surpassing by Magnegas Exhaust of EPA Requirements without Catalytic Converter	283
10	Anomalous Chemical Composition of Magnegas	288
11	Anomalous Energy Balance of Hadronic Molecular Reactors	291
12	Concluding Remarks	298
	Appendix 7.A	300
8.	THE NEW CHEMICAL SPECIES OF MAGNECULES	303
1	Introduction	303
2	The Hypothesis of Magnecules	305
3	The Five Force Fields Existing in Atoms	308
4	Magnecules Internal Bonds	310
5	Production of Magnecules in Gases, Liquids and Solids	316
6	New Molecules Internal Bonds	322
7	Main Features of Magnecules to be Detected	324

8	Necessary Conditions for the Correct Detection of Molecules and Magnecules	326
8.1	Selection of Analytic Instruments	326
8.2	Unambiguous Detection of Molecules	328
8.3	Unambiguous Detection of Magnecules	331
8.4	Apparent Magnecular Structure of H ₃ and O ₃	333
8.5	Need for New Analytic Methods	336
9	Experimental Evidence of Gas Magnecules	337
9.1	Conventional Chemical Composition of Magnegas Used in the Tests	337
9.2	GC-MS/IRD Measurements of Magnegas at the McClellan Air Force Base	338
9.3	GC-MS/IRD Tests of Magnegas at Pinellas County Forensic Laboratory	341
9.4	Interpretations of the Results	347
9.5	Concluding Remarks	352
10	Experimental Evidence of Liquid Magnecules	354
10.1	Preparation of Liquid Magnecules used in the Tests	354
10.2	Photographic Evidence of Magnecules in Liquids	355
10.3	Spectroscopic Evidence of Liquid Magnecules at the Tekmar-Dohrmann Corporation	358
10.4	Spectroscopic Evidence of Liquid Magnecules at Florida International University	363
11	Experimental Verification of Mutated Physical Characteristics	364
12	Concluding Remarks	375
	Appendix 8.A Aringazin's Studies on Toroidal Orbits of the Hydrogen Atom under an External Magnetic Field	376
	Index	393
